

## Description

Creative Resins Acrylic Enamel paint can be used in areas where extreme anti corrosion resistance is demanded. Our Acrylic Enamel Anti-Corrosion paint is perfect for coastal areas with high pollution and salutation. The metal enamel paint exhibits excellent anti corrosive properties when used in combination with our Zinc Primer 7002 and our Epoxy Primer 7011.

The paint can be used successfully in buildings and areas with almost permanent condensation and extremely high levels of pollution and salutation. The paint can also be applied using a conventional spray gun or simply by hand using either a paint brush or roller. The paint is suitable for all kinds of ferrous and non-ferrous metal surfaces and is available in any colour option.

## Recommended Substrates

Steel, stainless steel, galvanised steel, zinc and aluminium and areas where extreme anti corrosion protection is demanded.

## Features and Benefits

Excellent Surface Adhesion | Excellent mechanical, chemical and abrasion resistance | High Antioxidant and anti-corrosive properties when used in combination with our metal primers | Supplied with aliphatic hardener | Available in any colour | Weatherproof and UV resistant

## Mixing and Application

Spray gun: Dilute with CR if required to achieve desired viscosity for spray gun application.

Brush and roller: Direct application. It does not need to be diluted.

Degrease substrate using CR degreaser. Remove all rust and anti-corrosion.

Apply 1 - 2 coats. Recoat after 60 minutes (at 20° C) Apply appropriate CR primer for high anti corrosion properties.

## Chemical Properties

Product density: 1,30 gr/cm<sup>3</sup> ± a t 20°C

Colour: Any colour

Product viscosity: 39sec ± 5sec Cup: FORD 4

Application viscosity: 39sec ± 5sec Cup: FORD 4

Unit 17C, Upper Field Road, Sittingbourne, Kent, ME10 3UP UK
