

Description

UT Pigments are highly concentrated pigments that are intermixable to create over 15000 colours from our 'Colour Match' software, including industry recognised swatch books such as RAL, Pantone and NCS. 17 base pigments and 5 Aluminiums mixed manually or automatically, designed to work in conjunction with all of our surface coating for doors, windows, glass and metal.

Recommended Substrates

Used to tint all Creative Resins solvent based surface coatings for composite, PVCu, metal, concrete wood and more.

Features and Benefits

Extremely Concentrated | UV stable | Very High Opacity | Full colour range

Mixing and Application

Mix with all CR solvent based surface coatings. Percentage of pigment will depend on which surface coating base is used, full formulation mixing details for over 15000 colours can be found on our 'Colour Match' software.

Ensure surfaces to be coated are dry and must be cleaned using the appropriate CR product to remove all traces of contaminants.

Chemical Properties

Product density: Individual Tint Specific

Storage: Between 5°C and 25°C

Colour: Full Tint Range

Shelf life: 12 months

Product viscosity: Individual Tint Specific

Flash Point: 44°C

Unit 17C, Upper Field Road, Sittingbourne, Kent, ME10 3UP UK
